INTRODUCTION TO NETWORK

1. Draw a simple diagram (hand-drawn or digital) showing how your phone connects to Instagram, including your device, WiFi router, ISP, and Instagram server. Label each part and the connections.

1. **Phone** — the device used to open Instagram.
2. **Wi-Fi Router** — connects the phone to the internet.
3. **ISP (Internet Service Provider)** — provides internet access.
4. **Instagram Server** — receives requests and sends back photos, videos, messages, and other content.

2. List 5 devices you use or see daily that are part of a network (for example: smartphone, smart TV, WiFi router, laptop, smartwatch). For each, write what type of network it connects to (LAN, WAN, PAN, etc.)

5 Daily Devices and Their Network Types:-

No.	Device	Network Type	Purpose
1	Smartphone	WAN / WLAN	Connects to the internet using mobile data or Wi-Fi.
2	Laptop	LAN / WLAN	Connects to the internet through Wi-Fi or Ethernet.
3	Smart TV	WLAN / LAN	Connects to the internet to stream videos and movies.
4	Wi-Fi Router	LAN / WAN	Connects local devices and provides internet access.
5	Smartwatch	PAN	Connects to a smartphone using Bluetooth.

3. Explain the difference between the Internet and an intranet using an example from your college or a public WiFi you have used.

Difference Between Internet and Intranet:-

Internet	Intranet
The Internet is a public network available to everyone.	An intranet is a private network used by an organization.
Anyone can access websites using an internet connection.	Only authorized users can access it.
Example: Using public Wi-Fi to watch YouTube or Instagram.	**Example:** Using my college's private student portal to check attendance, results, or study materials.

4.Pick any one app you use (like WhatsApp, Zomato, or Flipkart) and describe, in 4-5 lines, how data travels from your device to their server and back when you perform a search inside the app.

Hint: Mention the devices and networks involved, and what happens when you hit 'search'.

How data travel in WhatsApp:-

1. When I open WhatsApp and search for a contact, my smartphone connects to the internet through Wi-Fi or mobile data.
2. The data travels through the router or mobile network and my ISP to WhatsApp's servers.
3. The server processes the request and sends the relevant search results or information back.
4. The data travels through the internet and reaches my smartphone.
5. WhatsApp displays the results on my screen.
